Is Clean Really Clean?

This project is about which cleaning product takes out grape juice stains the best. The purpose of this project is to see which cleaning products work the best. The three cleaning products are Clorox Clean-up, Mr. Clean Extra Power, and Easy-off Bam. Another reason this project is important because it is about keeping healthy. The researcher in this project poured 4.93 milliliters of grape juice in three piles on the counter. Keep the grape juice on the counter for thirty minutes. Wipe off the extra grape juice, and pour 4.93 milliliters of each cleaning product on the three piles. Evaluate how clean the cleaning products got out the three stains with the scale the researcher made. The cleaning product that did the best was Clorox Clean- Up. It got the stain out and got a four out of four. It turned out that the researcher's hypothesis was accepted. Clorox Clean-Up won above Mr. Clean and Easy- Off Bam.
