Why then, can one desire too much of a good thing? Shakespeare's As You Know It, 1600

My experiment was conducted to figure out if the antibiotic levels in different brands of store purchased would affect bacteria growth. I hypothesized that the higher the antibiotic levels are, the less bacteria growth there will be. My hypothesis was proven correct. My results concluded that when I compared Laura's, Maverick's and Target's store purchased ground beef, the results came out clear. Target's store purchased ground beef dramatically had less bacteria grown. Maverick's and Laura's store purchased ground beef grew about 30% more bacteria. The result of Laura's store purchased ground beef is what I believe to be is antibiotics that are inhibiting bacteria growth. I now can conclude that it is much safer and beneficial to consume store purchased ground beef that has no antibiotics present.
