The Hovercraft Project

The purpose of this project was to see if I could build another form of transportation. Although this would not be an efficient way of travel, I have proven that hovercrafts can hover over most terrains. All the crafts I built worked and did what they were designed to do, which was hover over the ground. I found that the best design was the one with the rubber bumper and 9 mil plastic skirt. The other designs worked but all their skirts wore down and holes were created. I have concluded that you need around a 4 hp leaf blower to sufficiently lift the craft off the ground.
