Mice, Mazes, and Music!

My hypothesis was, “If heavy metal or pop is played, the mouse will run the maze slower. If classical, country, or jazz is played, the mouse will run the maze much faster”. The purpose of my project was to simply see if music affects mice. I learned that classical and jazz has a HUGE effect on mice. I also learned that heavy metal, country, and pop doesn’t exactly affect mice’s intelligence, it had a great deal on behavior.
