*Time Course of Doxorubicin Accumulation in Cardiovascular Tissue*

If a wind turbine is used in a dry climate instead of a wet climate, then it will create more vacuum power. The purpose of this project was to determine if wind turbines do create a vacuum. Later in the experiment the purpose was modified. Do wind turbines create more vacuum effect in dry climates or wet? The most important data of the experiment was how big of a difference there was between the two climates. Out of this project, I learned that not only do wind turbines create vacuum but also that wind turbines in dry climates create more vacuum than wind turbines in wet climates.
