How Long Can You Stay Clean?

The purpose of this experiment is to see what Clean & Clear acne cleanser product can keep the human face the cleanest the longest. I hypothesized that if I used Deep Action, Essentials, Pomegranate Fruit Infusions, and Continuous Control. Then I thought that Continuous Control would control the amount of bacteria the longest and Essentials would relieve from cleansing the soonest. This experiment involved petri dishes and Clean & Clear products. I labeled each petri dish "Before and After" writing the subjects name on the side. Each human participant had their face dampened by rubbing a wet paper towel and then cleansing the face with the certain cleansing product and evenly spread it over their face. I then took a clean damp paper towel and took off all of the cleanser. After the procedure is completed, they will then come back five hours later and have their face cultured once again. I will then graph my data and conclude my science experiment.
