The Scoop on Poop

"The Scoop on Poop", The researcher studied if different types of manure would affect the way radishes grew in the soil. The researcher grew radishes in different types of manure mixed with soil. First of all, the manure used were cow, horse, and chicken. The researcher measured the number of leaves on the plants and how tall all of the plants were. The results turned out that the control did the best when compared to the tested manures.
